

Trimazin 30%

water dispersible powder

Composition

Trimethoprim 50 mg – Sodium sulfadiazine eq.
250 mg sulfadiazine – Excipients up to 1 g.

Target species

Calves and pigs.

Indications

Treatment and prevention infections caused by trimethoprim/sulfadiazine-sensitive germs in calves and pigs.

Dosage and administration

The dose is 30 mg active ingredients per kg body weight (= 25 mg/kg sulfadiazine and 5 mg/kg trimethoprim) per day for 7 consecutive days in calves and for 3 to 5 days in pigs.

This corresponds to 1 g of powder per 10 kg of body weight per day.

This daily dose is preferably divided into 2 equal doses which are then administered every 12 hours.

For treatment of the calf, the powder is mixed into the milk or artificial milk.

To treat the pig, the powder is thoroughly mixed into the pig feed or mixed into the drinking water.

To ensure correct posology, body weight should be determined as accurately as possible to avoid under-dosing.

Pack size

1 kg.
