

# Tylokel 75

water soluble powder 

## Composition

Tylokel 75 contains: Tylosin tartrate  
eq. 750 000 I.U. (750 mg) Tylosin –  
Excipients up to 1 g.

## Target species

Poultry, pigs.

## Indications

### Poultry:

- Treatment of chronic respiratory disease (CRD) caused by *Mycoplasma gallisepticum*.

### Pigs:

- Treatment of enzootic pneumonia caused by *Mycoplasma hyopneumoniae*.

## Dosage and administration

Tylokel 75 is a powder for administration in drinking water.

**Chickens:** therapeutic dose is 90 to 150 mg tylosin per kg b.w. per day, which corresponds to 120–200 mg of product per kg b.w. per day for 2 to 5 days. Medicated water should be the only source of drinking water. For treatment of CRD, Tylokel 75 is added to the drinking water during 2 to 5 days. If no improvement is noted, diagnosis and/or treatment should be reviewed.

**Pigs:** therapeutic dose is 30 to 60 mg tylosin per kg b.w. per day, corresponding to 40–80 mg product per kg b.w. for 3 to a maximum of 10 days. Medicated water should be the only source of drinking water.

The total amount of product needed to treat the entire group of animals for 1 day can be calculated as follows:

$$\frac{\begin{array}{l} \text{product dose (mg/kg)} \\ \times \text{mean body weight (kg)} \\ \times \text{number of animals} \end{array}}{\begin{array}{l} \text{total amount of water} \\ \text{taken for 1 day} \end{array}} = \dots \text{ required for} \\ \text{1 day.}$$

## Pack size

1.333 kg of finished product
