

DRYCLOXA-JECT

COMPOSITION:

1 injector contains:
Cloxacillin benzathine 1000 mg
Excipients up to 9000 mg.

PHARMACEUTICAL PROPERTIES:

Cloxacillin is an antibiotic of the isoxazolyl-penicillin group. It is bactericidal active against most important mastitis causing Gram-positive bacteria, such as *Streptococcus agalactiae*, *Str. dysgalactiae*, *Str. uberis*, *Staphylococcus aureus* (penicillinase producing *Staphylococci* included), and *Corynebacterium pyogenes*. Due to its special composition, Drycloxa-Ject shows a prolonged activity with therapeutically effective antibiotic levels in udder secretions for at least 3 weeks.

INDICATIONS:

For therapeutic and prophylactic treatment of mastitis caused by cloxacillin sensitive bacteria in cows at drying-off.

CONTRA-INDICATIONS, WARNINGS:

Do not use in animals known to be hypersensitive towards penicillins.

Do not use in lactating animals.

In case of clinically apparent mastitis, an appropriate mastitis therapy should be initiated before dry cow therapy.

DOSAGE AND ADMINISTRATION:

At the final milking, milk out thoroughly. Clean and disinfect teats. Thereafter instil the contents of one injector into each quarter. Treatment should be started at least 35 days before expected calving date.

PACK SIZE:

Box with 20 injectors (containing 9 g of suspension).
