Palmitoylethanolamide

Palmitoylethanolamide (PEA) is a glial cell modulator. Glial cells are Central Nervous System cells which release many inflammatory substances that act upon neurons, amplifying pain (Watkins and Maier, 2002). With time, PEA modulates (or tones down) overactive pain nerves into rest states. Due to the reduced mast cell activity, palmitoylethanolamide has a beneficial effect on itchy, red or irritated skin.¹ The addition of panthenol² and bisabolol³ increases the effect, making PEA-derm Cream a product that can be used for most skin irritations and itchy conditions.

- **Antipuritic – anti-inflammatory**
- **Alternative to 1% hydrocortisone cream**
- **PEA: Body's own substance therefore good tolerance**
- **For all species**
- **Ideal for long-term use and larger surfaces**

Dosage and method of use

PEA-derm Cream

antipruritic anti-inflammatory

- **For all species**
- **Cream with palmitoylethanolamide (PEA)**
- **Without cortisones, parabens, lanolin, sodium lauryl sulfate, dyes or perfume**

Packaging:

Plastic tubes of 150g

What is PEA-derm Cream and what is it used for?

PEA-derm Cream is a nourishing cream, without cortisones, with anti-itch and anti-inflammatory properties. PEAderm Cream has a unique composition with natural and body-specific components. PEA-derm Cream therefore has soothing and itch-relieving effects on red and irritated skin. The neutral base also ensures that the skin is hydrated and it supports the natural recovery of the irritated skin. PEA-derm Crème can be used to care for itchy, red and / or irritated skin in all animal species.

What can be the causes of itchy, red and / or irritated skin?

The skin is the largest organ of the body and must endure many influences from both the outside and the inside every day. Many factors can irritate the skin and cause it to become red, tight, or itchy. Irritated skin due to internal influences can, for example, be the case with:

- Dry skin
- Atopic skin
- Eczematic skin

External influences can also cause itchy, red or irritated skin:

- Sunburn or itching from sunburn
- Irritation of skin folds through sweat, moisture and other external influences
- Insect bites

With all the above causes of itchy, red and / or irritated skin, PEA-derm Cream can provide an itch-relieving and soothing support.

In which animal species can PEA-derm Crème be used and how is it used?

PEA-derm Cream is intended for all animal species of all ages. PEA-derm Cream can be applied several times a day according to need on all body parts. Do not use PEA-derm Cream on mucous membranes or open wounds. Take a sufficiently large amount of PEA-derm Crème and massage it gently. Although PEA-derm Cream can be used on large surfaces for longer periods, it is always advisable to consult your vet in this case.

When should PEA-derm Cream not be used?

- Do not use PEA-derm Cream if your pet is allergic to any of its components. In the event of an allergic reaction, discontinue use.
- Do not use PEA-derm Cream on open wounds and on mucous membranes.

What are the possible side effects of PEA-derm Cream?

No known side effects are to be expected when using PEA-derm Cream. As with all dermatological products, local hypersensitivity reactions to one of the ingredients can never be completely ruled out. If irritation occurs, discontinue use.

Important information and storage conditions:

Keep out of the reach and sight of children. For external use only. Store at room temperature. Do not use after the date indicated on the package after "EXP:".

Ingredients:

Aqua, Petrolatum, Cetearyl Alcohol, Paraffinum liquidum, Panthenol, Ceteareth-20, Palmitamide MEA, Phenoxyethanol, Ethylhexylglycerin, Sodium phosphate, Bisabolol
